24 March 1961

MEMORANDUM FOR: Assistant Director for Scientific Intelligence

FROM : Executive Officer

The following is an extract of a memorandum prepared by

25X1 who is our representative at the pre-Presidential

news conferences conducted by Pierre Salinger. The Director thought
it would be of interest to you.

11. Mr. Lloyd exhibited several pictures which had been taken by the Tyros II satellite which were much better than had been expected. These results were already known in scientific circles and he raised the question as to whether they should be released to the public. Mr. Salinger said he would like to take the matter up with the President before giving a judgment."
